

# Hammed Peter

Backend-Heavy Full Stack Developer • Laravel & PHP • AI-Powered Web Systems

marvelouspeter90@gmail.com • +234701233756

Nigeria

## PROFESSIONAL SUMMARY

Backend-focused full stack developer with 4+ years of experience designing and shipping production-grade web applications powered by Laravel, PHP, Node.js and AI integrations. Independently built and launched RSJobHub — a live AI-powered job and career platform with active users — and ExamPrep NG, a mobile-first SaaS exam preparation platform serving Nigerian students with a 15,000+ question bank. Experienced in RESTful API architecture, DevOps on Ubuntu VPS, AWS cloud services, OpenAI integrations, automated workflows, and subscription-based SaaS systems. Currently serving as Founding Engineer at an early-stage startup, driving full product development from architecture to deployment.

## TECHNICAL SKILLS

**Languages & Frameworks:** PHP, Laravel, JavaScript (ES6+), Node.js, Vanilla JS PWA

**AI & Integrations:** OpenAI API, AI-powered features, automated study plans, intelligent job matching

**Backend & APIs:** RESTful API design, webhook handling, Paystack payment gateway, email sequencing

**Database:** MySQL — schema design, query optimization, large dataset management (15k+ records)

**DevOps & Cloud:** Ubuntu VPS, Nginx, PHP-FPM, AWS SES, AWS EC2, SSL (Let's Encrypt), CI/CD deployment

**Frontend:** HTML5, CSS3, Tailwind CSS, Blade templating, PWA, mobile-first responsive design

**Tools & Workflow:** Git, GitHub, Composer, npm, Postman, Linux server administration

## PROFESSIONAL EXPERIENCE

**Backend Engineer & AI Features Developer** | [RSJobHub](#) June 2024 – Present

*RSJobHub is a live AI-powered job and career platform with active users, built on Laravel with advanced AI integrations and automated workflows.*

- Designed and maintained full backend architecture for RSJobHub including database schema, API layer, and server infrastructure supporting active concurrent users
- Built AI-powered CV Builder — analyzes user's uploaded CV and generates tailored, professionally optimized resumes using OpenAI GPT-4
- Developed AI Career Insights engine — provides personalized career path recommendations and industry insights based on user profile and job market data
- Built AI-powered Interview Prep system — generates role-specific interview questions with model answers tailored to each user's CV and target job
- Implemented Audio Mock Interview feature — real-time voice-based interview simulation where users speak and AI responds with feedback, powered by OpenAI speech APIs
- Created AI-powered CV Overview tool — automatically analyzes a user's CV against a specific job description and generates a match score with gap analysis
- Built AI-powered Skill Assessment and Job Matching system — evaluates user skills through dynamic assessments and matches them to relevant job listings intelligently
- Developed Automated Job API Ingestion — integrates external job APIs to automatically fetch, deduplicate, and save relevant job listings in real time
- Built automated job expiry and deletion system — cleans stale listings automatically to maintain platform quality without manual intervention
- Implemented Email Sequencing system — automated multi-step email campaigns for user onboarding, engagement, and job alert delivery

- Built WhatsApp Job Alert system — automated WhatsApp notifications sending personalized job matches to users based on their profile and preferences
- Migrated RSJobHub from shared hosting to Ubuntu VPS improving performance, scalability, and reliability; configured Nginx, PHP 8.2-FPM, and AWS SES for transactional emails
- Contributed to RSJobHub 1.0 launch and led ongoing RSJobHub 2.0 development with Laravel caching strategies and performance optimizations

### **Full Stack Developer & Founder** | [ExamPrep NG](#) September 2025 – Present

*ExamPrep NG is an independently built and launched AI-powered mobile-first SaaS exam preparation platform targeting Nigerian secondary school students (JAMB, WAEC). Acquired paying users within 24 hours of launch with zero external funding.*

- Independently designed and launched a full-stack AI-powered exam prep SaaS using Laravel 11 REST API backend and vanilla JS PWA frontend — fully mobile-optimized for teenage students
- Built and manages a 15,000+ question bank covering JAMB and WAEC past questions with custom importers, scrapers, automated classification, and intelligent deduplication
- Integrated OpenAI GPT-4 for real-time AI Explanations — students receive instant, detailed explanations for every question answer in plain language
- Built AI-powered Study Guide system — generates personalized, syllabus-aligned study plans based on each student's weak areas and exam timeline
- Developed AI Topic Notes feature — automatically generates comprehensive topic summaries for every subject and topic on the JAMB and WAEC syllabus
- Implemented Paystack payment gateway with full webhook handling and automated subscription lifecycle management including renewals and access control
- Deployed on Ubuntu VPS with Nginx and PHP 8.2-FPM; configured SSL, domain management, and server monitoring for high availability
- Achieved paying user acquisition within 24 hours of launch through organic channels with zero marketing budget

### **Freelance Laravel Developer** | [Logistics Management System](#) 2023 – 2024

*Built a custom logistics management system for a private client covering fleet, drivers, deliveries, and operations management.*

- Designed and built full logistics management system with fleet tracking, driver management, delivery assignment, and operations reporting
- Built RESTful API backend with Laravel, implemented role-based access control for admin, dispatcher, and driver roles
- Deployed to production on Ubuntu VPS with full Nginx configuration and SSL setup

## **NOTABLE ACHIEVEMENTS**

---

- Launched ExamPrep NG SaaS independently with zero external funding and acquired paying users within 24 hours of going live
- Built and manages a 15,000+ question bank with automated classification and deduplication — one of the largest JAMB/WAEC question repositories in production
- Shipped 8+ distinct AI-powered features across two live production platforms using OpenAI GPT-4
- Migrated RSJobHub from shared hosting to VPS architecture resulting in significant performance and scalability improvements
- Designed and deployed fully automated job ingestion, alert, and email workflows eliminating manual operations entirely
- Trusted as Founding Engineer at an early-stage startup — responsible for all technical architecture and product development decisions

## **EDUCATION**

---

### **High School Diploma** — Software and Web Development

*Continuous self-directed learning in backend architecture, AI integrations, DevOps, and SaaS product development*

## ADDITIONAL TECHNICAL SKILLS

---

**Server Management:** Nginx configuration, Ubuntu server administration, SSL management (Let's Encrypt), PHP-FPM tuning

**Scripting & Automation:** Node.js scripting, Laravel queues & jobs, scheduled tasks, webhook processing

**AI & APIs:** OpenAI API (GPT-4, speech), RESTful API consumption, third-party API integrations

**Other:** Paystack payment gateway, AWS SES, email deliverability, subscription management, PWA development
